Horizontal Lyfline System Skylotec SKYLINE 2.0

Product information

SKYLINE 2.0 is a configurable horizontal lifeline system designed for fall protection over long distances, supporting up to three users simultaneously. Featuring an 8 mm stainless steel cable, the system can be installed on floors, ceilings or walls to accommodate different structural conditions. It provides a flexible fall protection solution for industrial facilities, rooftops and other elevated work areas.

Best used for:

- Fall protection on large flat roofs, facades and industrial facilities.
- Elevated work areas in logistics, maritime facilities, sewage treatment plants and silos.

Product benefits:

- Supports up to three users simultaneously for coordinated work at height.
- Configurable for floor, ceiling or wall installation to suit different structures.
- Drive-over or non-drive-over configurations accommodate different movement and access requirements.
- Stainless steel load-bearing components provide corrosion resistance and reduce maintenance requirements.
