

Fork Lift Basket: TK-510

Product information

General: Instead of ladders and scaffolding, baskets are often a better solution for temporary jobs. Our range of standard baskets are suitable for the majority of fork lifts on the market. Only work of a temporary nature, such as maintenance, inspection and survey work, may be carried out.

Design: Load-bearing welded hollow-beam construction with scuff plate, and nonslip flooring of expanded metal. The basket has a protective grille on the fork lift frame, tubular handrails, a lockable gate, and a locking mechanism for counterbalance truck.

Proof: Function tested.

Material: Hollow-beam and plate of high-strength structural steel.

Marking: Sign according to standard SS 3628.

Finish: Yellow painted.

Note: Basket weight 160 kg

Warning: Before use basket and fork lift has to be initially inspected together.
