Lifting Tools

Product information

General: Lifting tools are used when traditional lifting beams are unsuitable for the task. These tools are often used to facilitate lifting of products safely, and in an ergonomically correct way during assembly or production work. Loads can vary from just a few kilograms to hundreds of tonnes. Lifting tools are custom-made and the work requires close liasion with the customer.

Proof load: 1,5 times WLL. If possible, combined with the customer's product or as a separate fixture.
