Compensator levo

Product information

The Pewag levo compensator is a remote-controlled load compensator designed to keep loads steady and evenly distributed during lifting. It reduces manual handling by allowing precise multi-directional movement, with safe remote operation up to 100 m.

Best for:

- Lifting operations that need smooth, pinpoint load control and even load distribution.
- Applications where remote operation and reduced manual handling improve efficiency and safety.

Product benefits:

- Remote control supports precise load adjustment without direct manual intervention.
- Multi-directional movement reduces handling effort during positioning.
- Hydraulic motor is low maintenance and energy-efficient for routine use.
- Safe remote operation up to 100 m suits separated control points.
- IP65 protection supports use in demanding industrial environments.
